OPERATION

Nummax Manager LOCAL is a free software stored in your Poster hardware for content broadcasting.

It is only accessible by connecting a computer (usb or wifi) to your Nummax display.

Contents and lists are saved in the memory but are neither editable nor programmable on a schedule.

LOG IN TO NUMMAX MANAGER LOCAL

To open the local software, open your web browser and enter the IP address in the URL address bar :

If you are connected by **WIFI**: 192.168.43.1

If you are connected by **USB** cable: 192.168.42.129

You must have previously connected your computer to your display (see the connection guide supplied with your Nummax equipment) and be **on the same network** (computer and your Nummax display).

CHOOSE NOW Nummax Manager AIO Cloud version

And access many features!

- ✓ Multi-display synchronization
- ✓ Media library
- ✓ Programmable playlists and commands
- ✓ Marketing report
- ✓ Full display control
- ✓ Customer account management
- ✓ Training and support
- ✓ And much more...

HOME PAGE

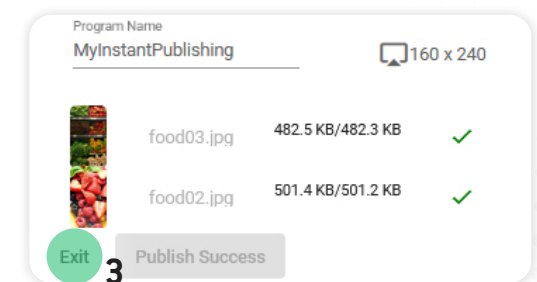

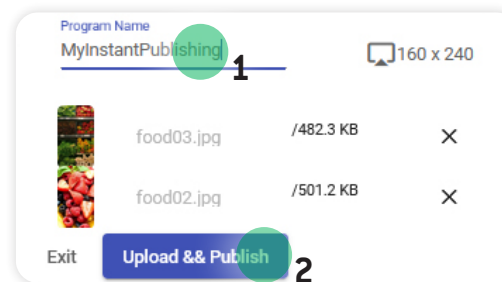

1. Display name. Click on the pencil to change the name
2. Current playlist information and display storage capacity
3. Menu
4. Display control buttons for standby, wake-up and reboot
5. Screen capture refresh (Allows instant control of the broadcast in progress)
6. Regional settings of your display. Click on the pencil to change these settings

You can instantly broadcast content in your display with a simple **drag & drop** of your images and videos in the middle of the homepage.

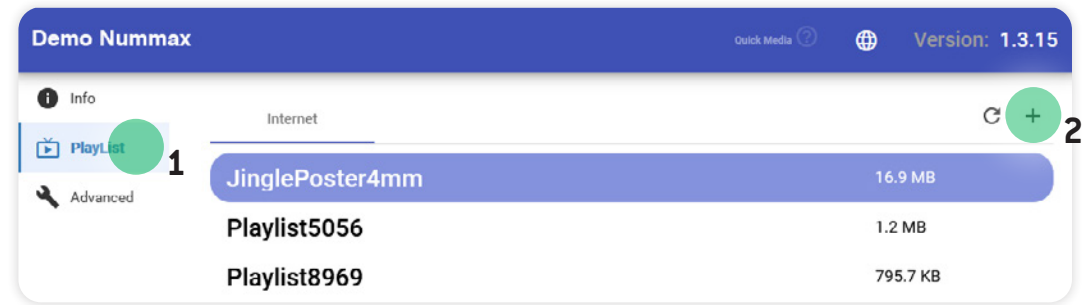

You must click the **Upload & Publish** after naming the playlist.

! Only .jpg .png .bmp .gif images and .mp4 .mov and .wmv videos are accepted. No other formats are permitted (.pdf .ppt .doc .xls .psd .html .wmv .mov, ...)

Select **Playlist** in the left menu and **click on +** to create a new playlist.

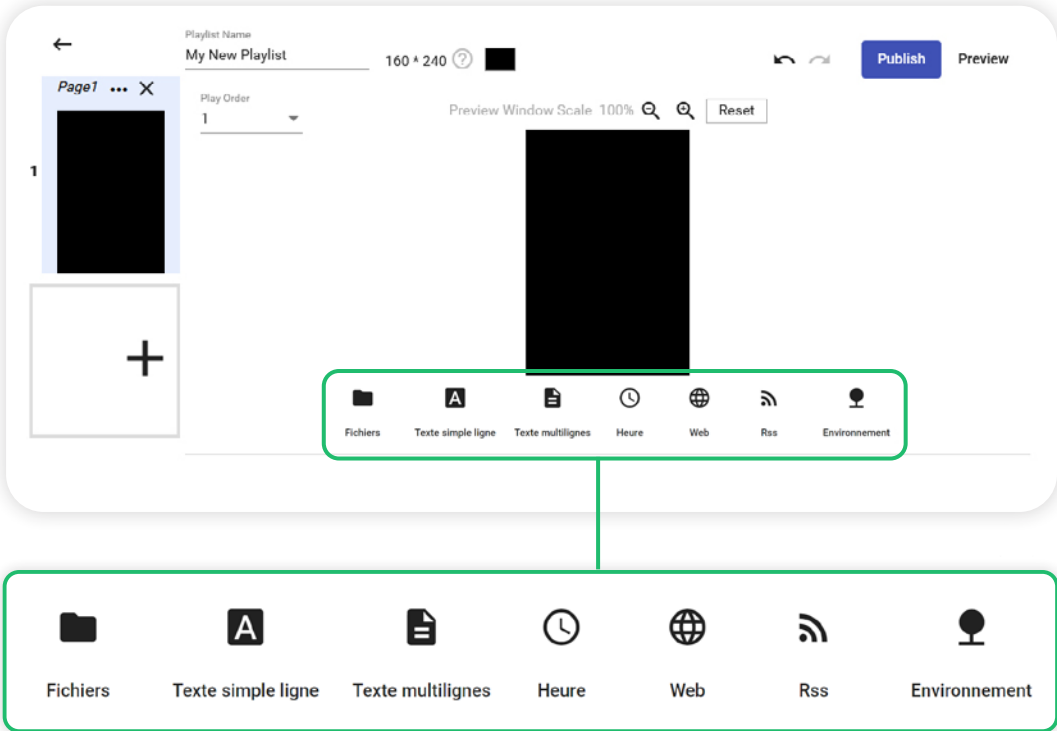

Rename your playlist and check that pixels size match your display matrix (pixel height and width of your Nummax display). Adjust accordingly to the size.

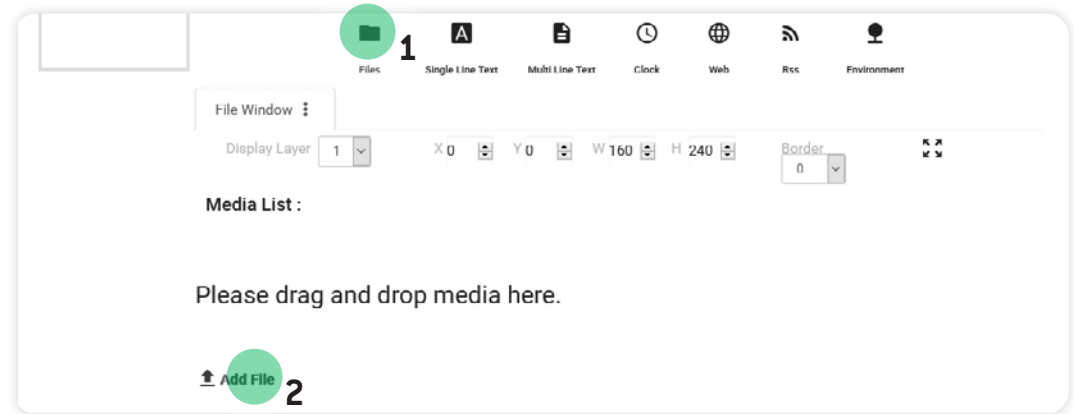

CONTENT SELECTION

Discover the selection of contents you can display.

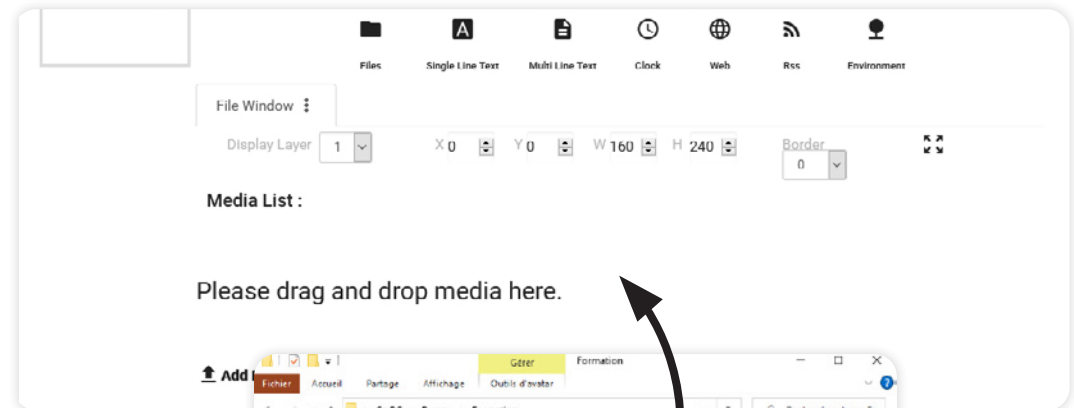

-  Files (images and videos)
-  Single line text
-  Multi line text
-  Clock (date and time)
-  Web page (URL)
-  RSS feed
-  Environment data (sensors required)

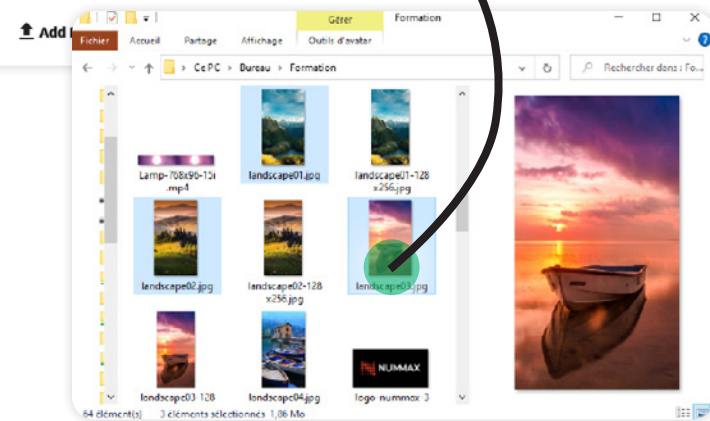

Files

To quickly create a slideshow, click **Files** then **Add File** to add your images. You can also **drag & drop** in the lower area from your computer.

Please drag and drop media here.

You can change images duration and click on **No effect** to add transitions.

Preview let you check the sequence before you click on **Publish** to broadcast in your Nummax display.

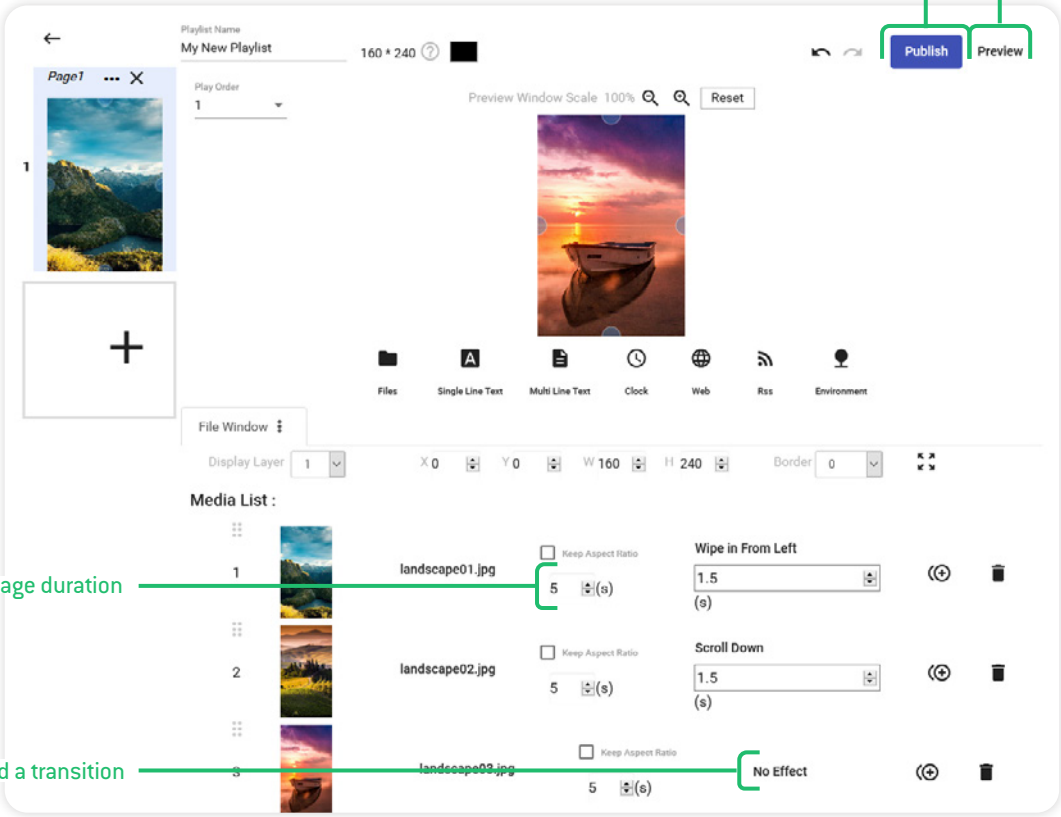

! Transitions between slides are not rendered in the preview. Transitions are only visible in the display broadcast.

Add a new sequence to the playlist

Change image duration

Add a transition

Preview the playlist
Publish in your display

A Single line text

1. Add text

2. Input your text

3. Reveal options

Change the font

Add effects on text

Control display duration, scrolling, background color,...

When you add a content item to your slideshow, such as single-line text, a window block will be created. It is possible to move it in the display area and adjust the size of the frame. Options such as block size and adding a border are available.

The screenshot displays the Nummax Manager LOCAL interface for creating a playlist. The main area shows a preview of a slide titled 'Page1' with a 'TRAVEL' window block. A green dashed box highlights the 'TRAVEL' text, and a green arrow points to it with the label 'Window block'. Another green arrow points to the text with the label 'Move the window block in the display area and adjust the block size'. Below the preview, a toolbar includes icons for 'Files', 'Single Line Text', 'Multi Line Text', 'Clock', 'Web', 'Rss', and 'Environment'. The 'Single-Line Text Window' configuration panel is open, showing 'Display Layer' set to 2, 'X' and 'Y' coordinates at 0, 'W' (width) set to 160, 'H' (height) set to 64, and 'Border' set to 0. A green arrow points to the 'W 160' and 'H 64' fields with the label 'Window block adjustments'. Another green arrow points to the 'Border 0' field with the label 'Add a border to the window'. The text 'TRAVEL' is visible in the preview area. Below the configuration panel, there are sections for 'Font' (Arial, Size 36, Bold, Italic, Underline, Color), 'Outline/Shadow' (Require Player Ver>1.37.6), and 'Effect'.

Multi line text

1. Add a paragraph

2. Input mutli line text

Change the font

Add effects to the text

Control display duration, scrolling, background color,...

🕒 Display date and time

The screenshot shows the Nummax Manager LOCAL interface for creating a playlist. It features two pages: Page 1 with a 'TRAVEL' image and Page 2 with a clock widget. A configuration panel for the clock widget is open, showing options for clock style, fixed text, font, and display format. Green callout lines connect the text labels to specific parts of the interface.

Choose the type of clock - Points to the 'Clock Style' dropdown menu in the configuration panel.

Add a text in front of the clock - Points to the 'Fixed Text' input field in the configuration panel.

Change the font and select elements to be displayed (date, time) - Points to the 'Font' section, including font type, size, color, and checkboxes for Year, Month, Date, Week, Hour, Minute, and Second.

Control display duration and background color - Points to the 'Effect' section in the configuration panel.

🌐 Display a web page (URL)

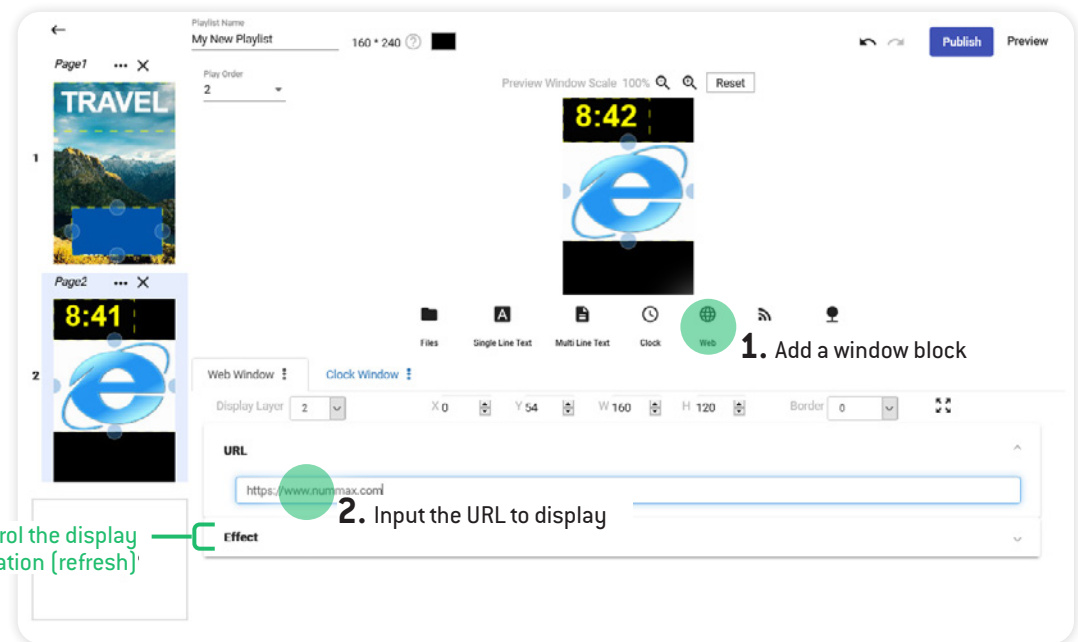

You can display a web page (URL address) in the sequence cycle. It is essential that your display stays connected to the Internet to display an updated snapshot at each cycle of the playlist.

The rendering of the web page will be adapted to the width in pixels of your window block.

Displaying URLs can be very practical to broadcast web applications (eg: parking space counting system, discounts displayed from your website, ...) or any external data.

Your display uses the coordinates 0-0 (top left corner) as the starting point for the pixel area to be displayed.

! The web page will be adapted to the pixel width of your window block in the sequence. It can look very different from what it looks like on a desktop monitor (1920 pixels).

📡 Display RSS feed

The screenshot shows the 'My New Playlist' interface in Nummax Manager LOCAL. It features a preview window with a clock and RSS feed icons, and a configuration panel for an 'Rss Window'. Annotations include:

- 1. Add a RSS feed windows block**: Points to the 'Rss' icon in the toolbar.
- 2. Input the RSS feed URL**: Points to the text input field containing 'https://www.yahoo.com/rss/news'.
- Change the font**: Points to the 'Font' section in the configuration panel.
- Choose elements to display**: Points to the 'Display' section with checkboxes for 'Channel image', 'Update Time', 'Item Title', and 'Item Description'.
- Control display duration, scrolling, background color**: Points to the 'Effect' section in the configuration panel.

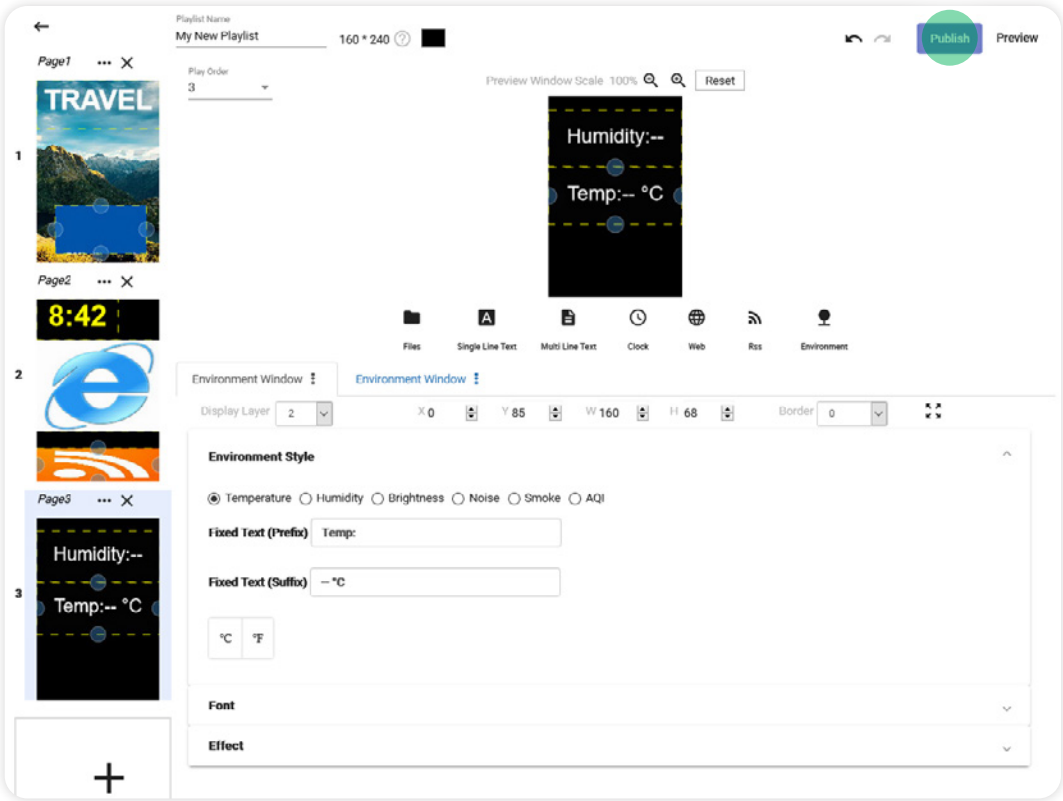

Display environment data

To display information relating to the environment around your display (humidity rate, temperature, smoke level, ...) your system requires the addition of various sensors.

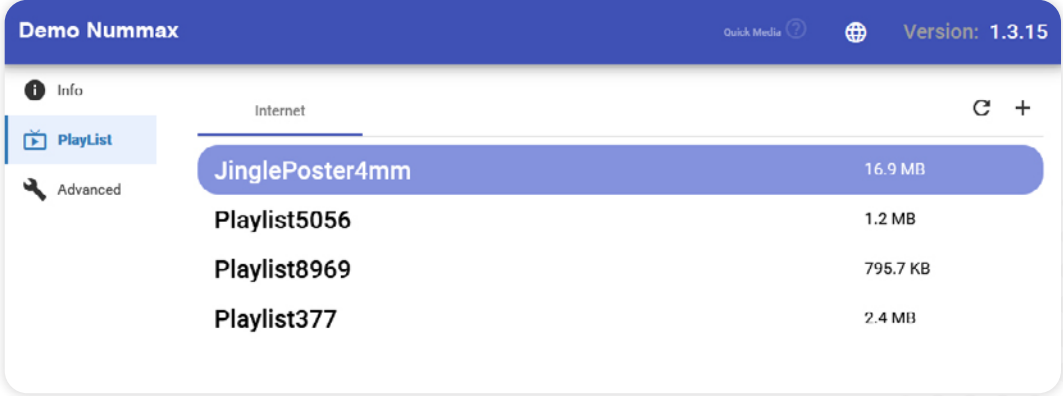

This feature is usually used for outdoor displays.

The screenshot shows the 'My New Playlist' interface in Nummax Manager LOCAL. It features a preview window on the right displaying 'Humidity:--' and 'Temp:-- °C'. Below the preview is a control panel for the 'Environment Window' block. The control panel includes a 'Display Layer' dropdown set to '2', and a grid of settings for X (0), Y (85), W (160), H (68), and Border (0). The 'Environment Style' section has radio buttons for Temperature (selected), Humidity, Brightness, Noise, Smoke, and AQI. It also has input fields for 'Fixed Text (Prefix)' containing 'Temp:' and 'Fixed Text (Suffix)' containing '-- °C'. There are also buttons for '°C' and '°F'. Below the style section are 'Font' and 'Effect' dropdown menus. Green callout boxes with arrows point to these sections: 'Choose elements to display' points to the 'Environment Style' section, 'Change the font' points to the 'Font' dropdown, and 'Control display duration and background color' points to the 'Effect' dropdown. A blue callout box with an arrow points to the 'Environment' icon in the bottom toolbar, labeled 'Add environment data window block'.

When you have finished preparing all your sequences' pages, you can publish your playlist to the display by clicking **Publish**.

It only takes a few seconds to see your content broadcasted.

BRIGHTNESS CONTROL

In the **Advanced** section of the software, you access information and settings for your display.

We recommend that you do not change the factory settings in order to maintain your warranty.

Only the brightness can be changed in this section.

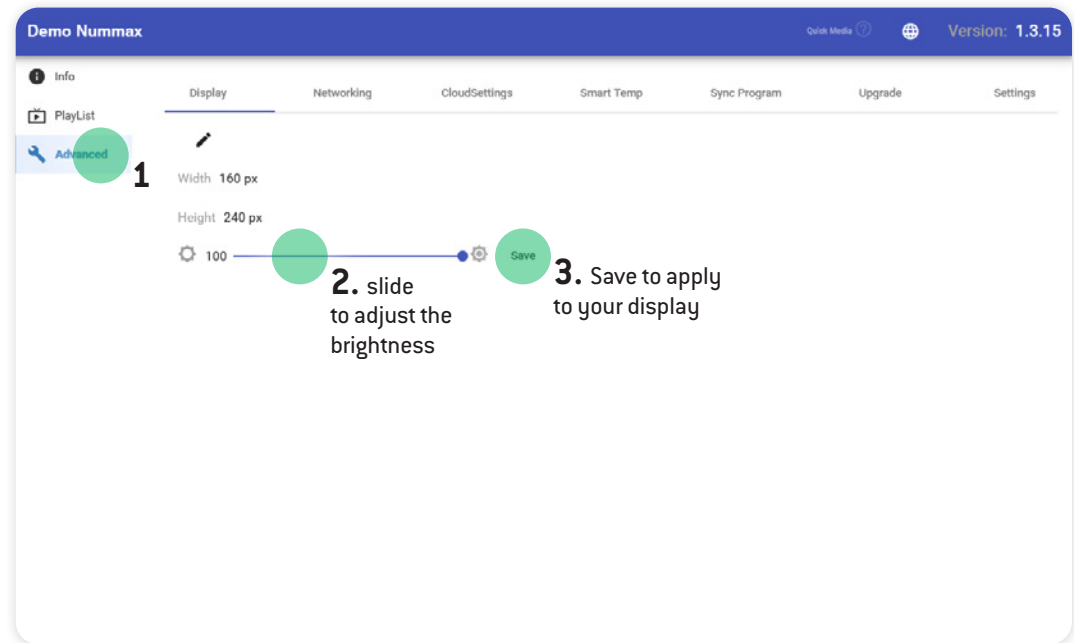

Suggested settings :

15% - Night

20-30% - Evening and very cloudy weather

70-85% - Day

80-100% - Bright sunny day

The power consumption of your display is directly related to the brightness. Reduce brightness at night!

Is it possible to save media (images, videos) in the display before publishing them?

No, no media can be temporarily saved in the display's memory. Only current media and playlists are kept in memory. To benefit from storage of your media, choose Nummax Manager AIO (Cloud). Contact Nummax to change your subscription.

Can we put several slideshows in the same sequence page?

Yes. You can put several content window blocks in a single sequence page.

How to schedule content at certain times?

The free Nummax Manager Local software does not benefit from this functionality. Only the AIO (Cloud) version allows programming in a calendar.

How long will each of my sequence pages be displayed?

In a playlist you can create sequence pages. Each sequence page contains content window blocks (slideshow, text, clock, ...). The display duration of the longest element will determine the overall duration of the sequence page. Ex: a sequence page with an image of 15s, a title that scrolls for 20s. The duration of this sequence page will be 20s.

Is it possible to automate brightness changes?

No, only the AIO (Cloud) version allows you to program brightness changes.

Can I access Nummax Manager Local with any device?

Yes, but the device must be able to connect to the display network (from the same local network) and be physically nearby.

Is it possible to display the weather or the local temperature?

No, only the AIO (Cloud) version can integrate the weather content of your city or your area.

I would like to have a media broadcast report to sell advertising spaces and make my Nummax display profitable, what should I do?

The free Nummax Manager Local software does not benefit from this functionality. Only the AIO (Cloud) version allows you to view and download a media broadcast report.

Do I have to change my Nummax display to get the new features?

No need to change your display. Contact us so that we can activate your account (fees may apply).

Is there a library of already existing media that I could use?

The free Nummax library is available on the Nummax Manager AIO (Cloud) version and will give you access to many medias.
