Nummax Manager
LOCAL

User's Guide

NUMMAX

Introduction

Nummax Manager LOCAL is a free software in your Poster hardware for content broardcasting.

It is only accessible by connecting a computer (usb or wifi) to your Nummax display. Contents and lists are saved in the memory but are neither editable nor programmable on a schedule.

> **Change for Nummax Manager AIO Cloud version and access to additional features**
> **(Content librairy, Schedule, Templates, ...)**
> **Call now 1-877-255-3471 #204**

Connect to Nummax Manager Local

To open the local software, open your web browser and enter the IP address in the URL address bar:

If you are connected by WIFI: **192.168.43.1**

If you are connected by USB cable: **192.168.42.129**

You must have previously connected your computer to your display (see the **connection guide** supplied with your Nummax equipment) and be on the same network (computer-Nummax display).

Homepage
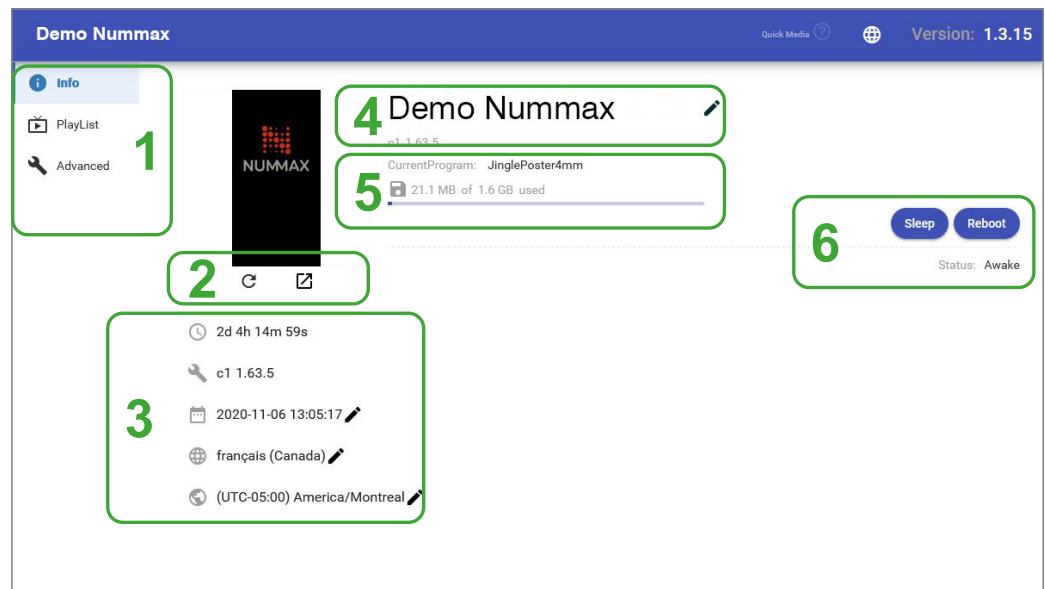

1. Menu
2. Screen capture refresh (Allows instant control of the broadcast in progress)
3. Regional settings of your display. Click on the pencil to change these settings
4. Display name. Click on the pencil to change the name
5. Current playlist information and display storage capacity
6. Display control buttons for standby, wake-up and reboot
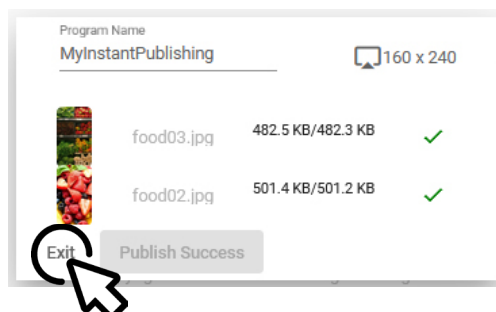

Broadcast content

You can instantly broadcast content in your display with a simple **drag & drop** of your images and videos in the middle of the homepage.
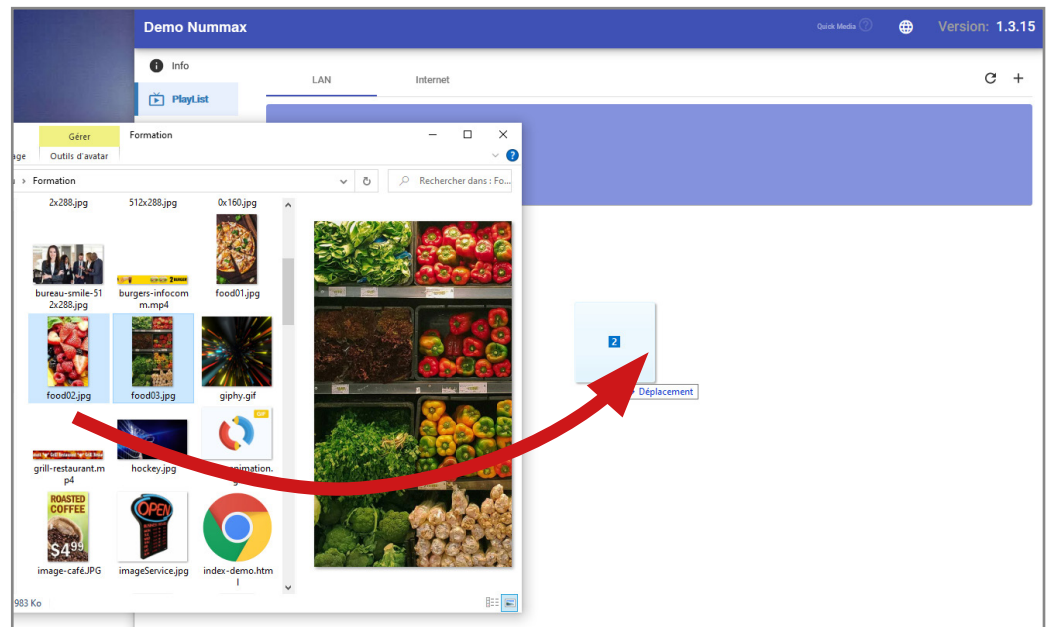

You must click the **Upload & Publish** after naming the playlist.

Only .jpg .png .bmp .gif images and .mp4 videos are accepted. No other formats are permitted (.pdf .ppt .doc .xls .psd .html .wmv .mov, ...)

Create a playlist

Select **Playlist** in the left menu and click on **+** to create a new playlist.

Rename your playlist and check that pixels size match your display matrix (pixel height and width of your Nummax display).
Adjust accordingly to the size.

Create a slideshow

To quickly create a slideshow, click **Files** then **Add File** to add your images.
You can also **drag & drop** in the lower area from your computer.
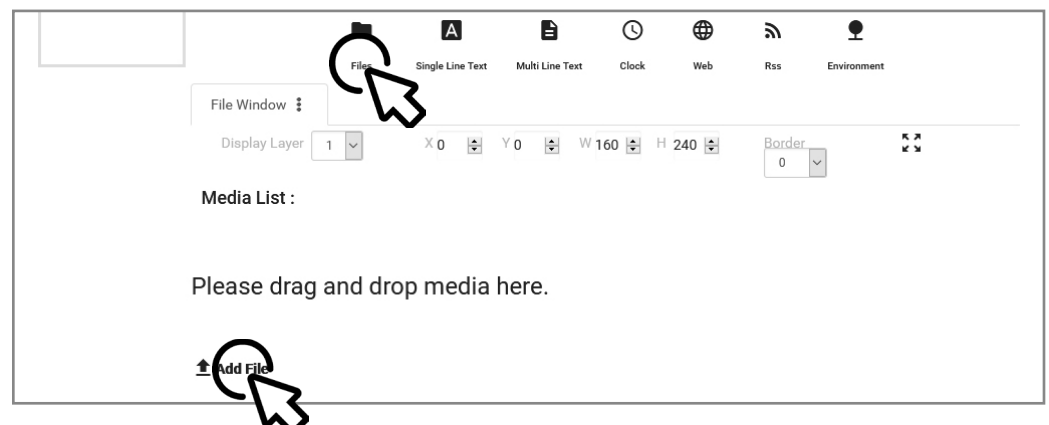

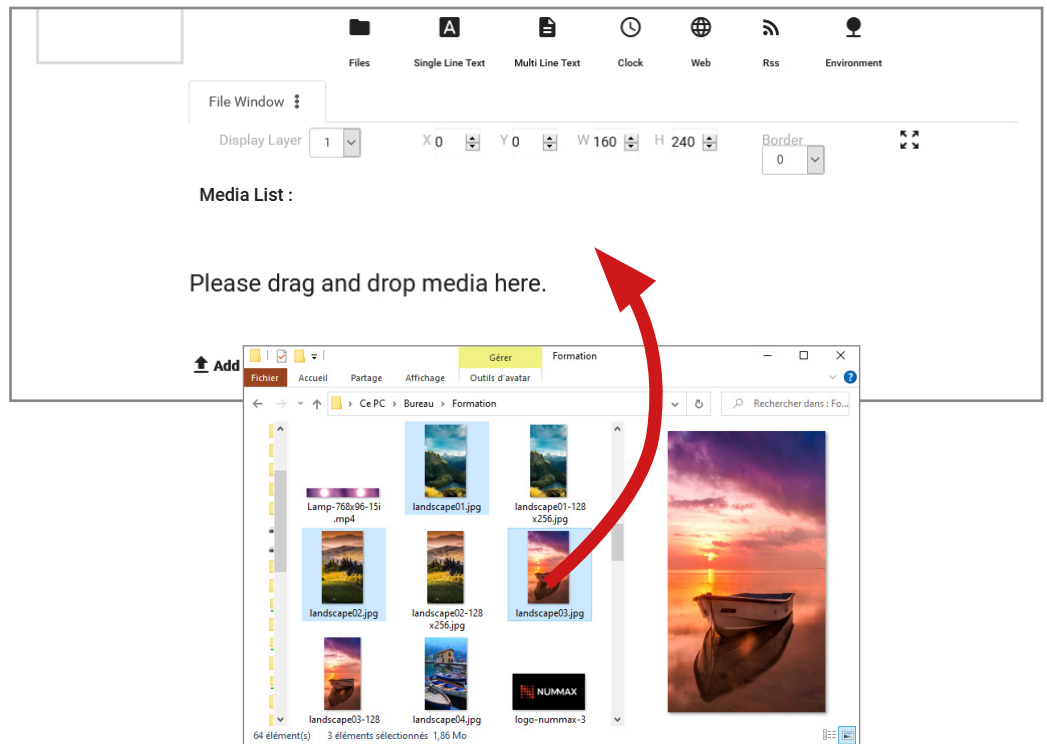

You can change images duration and click on **No effect** to add transitions.
Preview let you check the sequence before you click on **Publish** to broadcast in your Nummax display.

Preview the playlist

Publish in your display

Add a transition
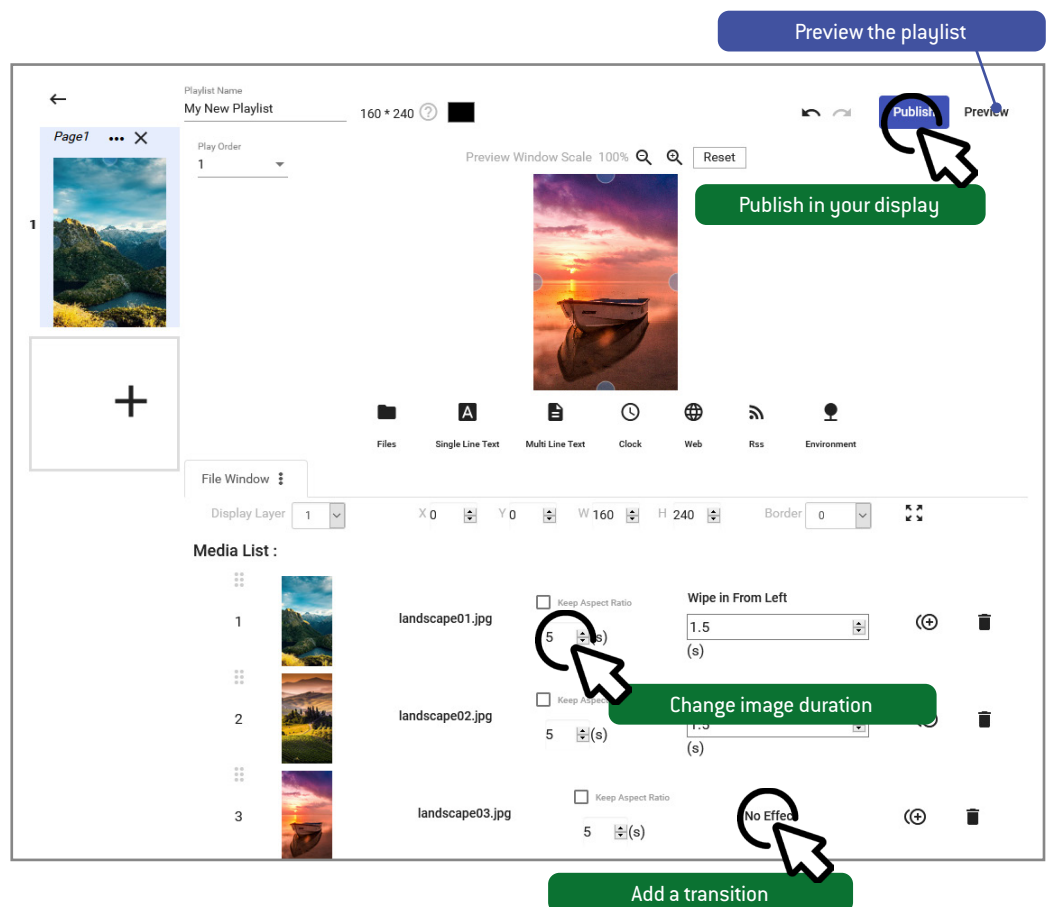

Content selection

Discover the selection of contents you can display.
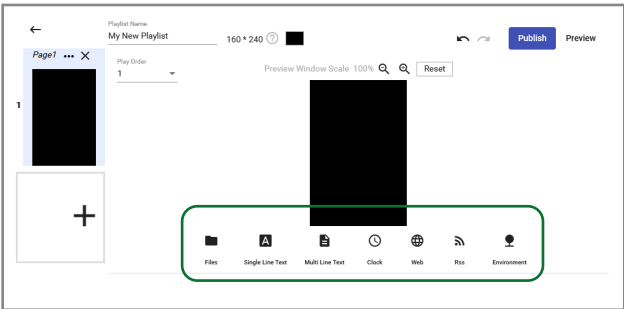

1	2	3	4	5	6	7
Files	Single Line Text	Multi Line Text	Clock	Web	Rss	Environment

1. Your images and videos
2. Single line text
3. Multi line text
4. Clock (date and time)
5. Web page (URL)
6. RSS feed
7. Environment data (Sensors required)

Single line text

- Click to add text
- Input your text
- Change the font
- Click to reveal options
- Add effects on text
- Control display duration, scrolling, background color,...

Working area

Window block

Click and move the window block in the display area and adjust the block size

Add a new sequence to the playlist

Window block adjustements

Add a border to the window

Multi line text

Click to add a paragraph

Input multi line text

Change the font

Add effects to the text

Control display duration, scrolling, background color,...

Display date and time

Click to add a clock

Choose the type of clock

Add a text in front of the clock

Change the font and select elements to be displayed (date, time)

Control display duration and background color

Display a web page (URL)

You can display a web page (URL address) in the sequence cycle. It is essential that your display stays connected to the Internet at all times to display a snapshot of each cycle of the playlist.

The rendering of the web page will be adapted to the width in pixels of your window block.

The display of a URL can be very practical for the display of web applications (eg: parking space counting system, discounts displayed from your website, ...).
Your display uses the coordinates 0-0 (top left corner) as the starting point for the pixel area to be displayed.

The web page will be adapted to the pixel width of your window block in the sequence. It can look very different from what it looks like on a desktop monitor (1920 pixels).

Click to add a web window block

Input the URL to display

Control the display duration (refresh)

Display RSS Feed

Click to add a RSS feed window block

Input the RSS feed URL

Change the font

Choose elements to display

Control display duration, scrolling, background color
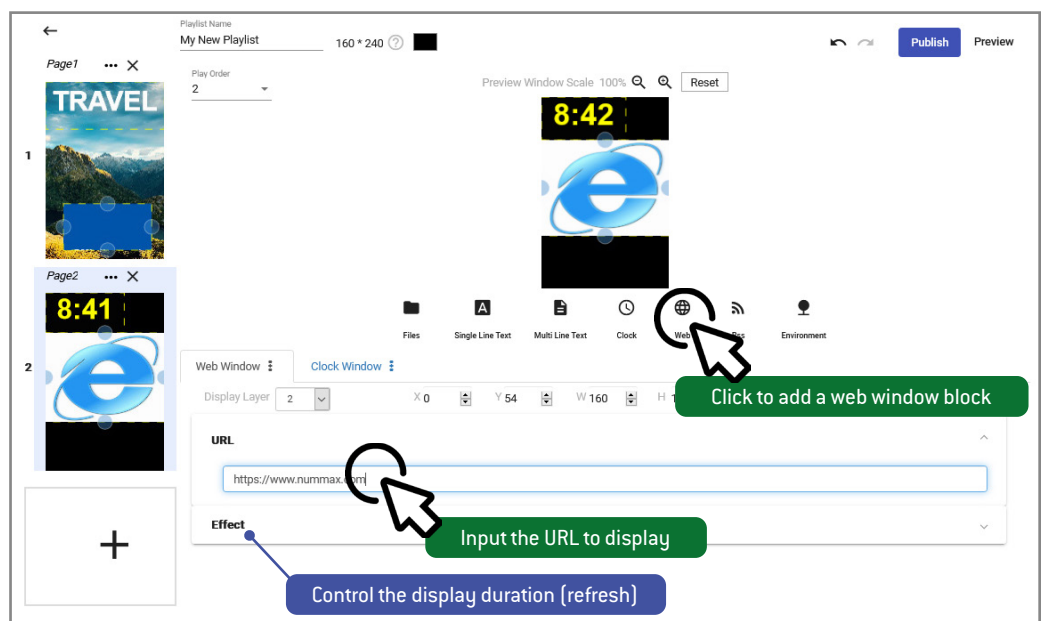

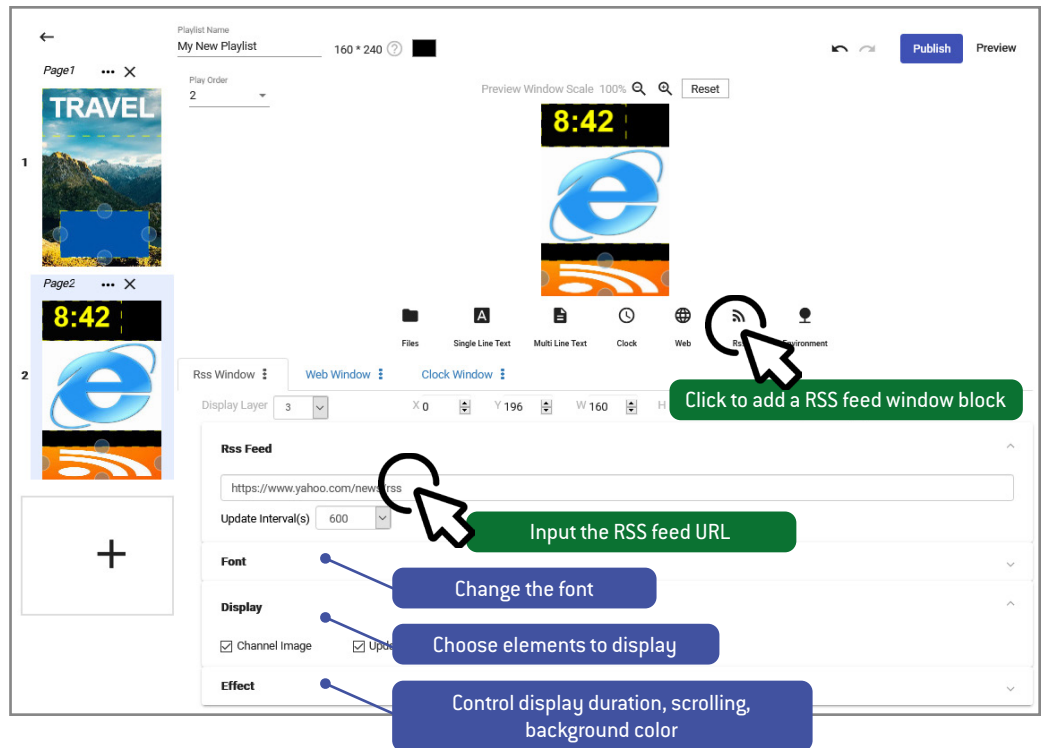

Display environement data

To display information relating to the environment around your display (humidity rate, temperature, smoke level, ...) your system requires the addition of various sensors.

This feature is usually used for outdoor displays.

Click to add environement data window block

Choose elements to display

Change the font

Control display duration and background color

When you have finished preparing all your sequences' pages, you can publish your playlist to the display by clicking **Publish**.
It only takes a few seconds to see your content broadcasted.

Control your display

In the **Advanced** section of the software, you access information and settings for your display.
We recommend that you do not change the factory settings in order to maintain your warranty.
Only the brightness can be changed in this section.

Suggested settings:
15% - Night
20-30% - Evening and very cloudy weather
70-85% - Day
80-100% - Bright sunny day

Brightness control
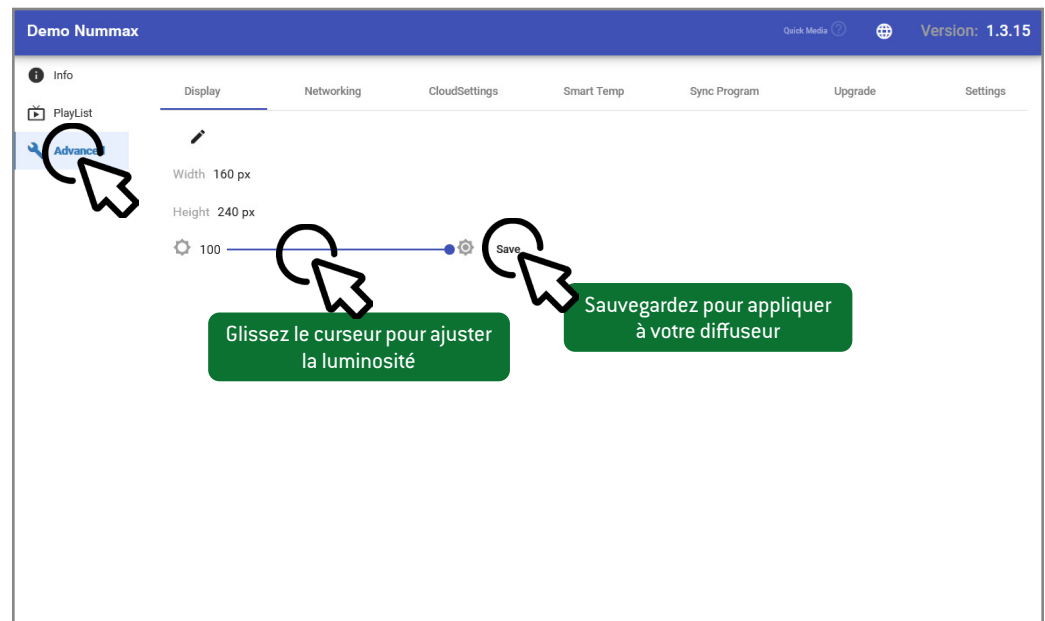

The power consumption of your display is directly related to the brightness.

Reduce brightness at night!

Questions and answers

Is it possible to save media (images, videos) in the display before publishing them?
No, no media can be temporarily saved in the display's memory. Only current media and playlists are kept in memory. To benefit from storage of your media, choose Nummax Manager AIO (Cloud). Contact Nummax to change your subscription.

Can we put several slide shows in the same sequence page?
Yes. You can put several content window blocks in a single sequence page.

How to schedule content at certain times?
The free Nummax Manager Local software does not benefit from this functionality. Only the AIO (Cloud) version allows programming in a calendar.

How long will each of my sequence pages be displayed?
In a playlist you can create sequence pages.
Each sequence page contains content window blocks (slide show, text, clock, ...). The display duration of the longest element will determine the overall duration of the sequence page. Ex: a sequence page with an image of 15s, a title that scrolls for 20s. The duration of this sequence page will be 20s.

Is it possible to automate brightness changes?
No, only the AIO (Cloud) version allows you to program brightness changes.

Can I access Nummax Manager Local with any device?
Yes, but the device must be able to connect to the display network and be physically nearby.

Is it possible to display the weather or the local temperature?
No, only the AIO (Cloud) version can integrate the weather content of your city or your area.

I would like to have a media broadcast report to sell advertising spaces and make my Nummax display profitable, what should I do?
The free Nummax Manager Local software does not benefit from this functionality. Only the AIO (Cloud) version allows you to view and download a media broadcast report.

Do I have to change my Nummax display to get the new features?
No need to change your display. Contact us so that we can activate your account (fees may apply).

Is there a library of already existing media that I could use?
This benefit will soon be available on the Nummax Manager AIO (Cloud) version and will give you access to many templates and medias from the Nummax library.

Discover Nummax Manager AIO Cloud version features next page.

Sales Department

Our sales department can answer your questions and requests for software and equipment upgrade:
1-877-255-3471 # 204 - 8:00 am to 4:00 pm EST.

Technical support

Contact our technical support for any software and hardware question:
1-877-255-3471 # 205 - 8:00 am to 5:00 pm EST.
